

Press release - 17th April 2025

## **TECMAR, new distributor of PAGURO generators**

**Tecmar is continuing to expand its catalogue with the arrival of a new brand : PAGURO generator sets manufactured by the Italian company Volpi Tecno Energia.**

### **PAGURO, a reference in electrical energy**

At the cutting edge of technology and reliability since 1933, the PAGURO range includes 3000rpm, 1500rpm and variable speed generators from 3 KVA to 22 KVA.

They are designed for both pleasure boats and ocean-going cruisers, as well as professional marine and land vehicles.

*Martin LAMBOT : "Whether for a boat or a vehicle, electrical power is an essential element for the operation of on-board equipment. With the addition of PAGURO generators to our product catalogue, we are now in a position to meet any electrical system requirement, from the most basic to the most sophisticated."*

### **PAGURO range: performance and silence for all**

PAGURO marine generators are renowned for their combination of performance, silent operation and compact size.

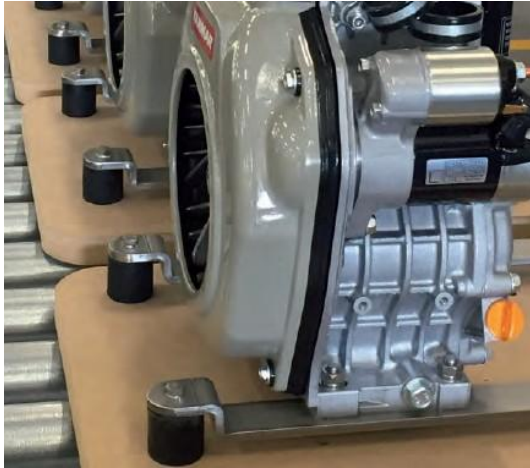

PAGURO offers a wide range of products to meet all power and performance requirements for sailboats and powerboats.

## **Silent**

As the engine and generator of the PAGURO generators are both water-cooled, there is no need for an air intake for cooling, which limits the number of openings in the cocoon and optimises sound insulation.

A single opening is left at the base of the cocoon for the air needed for combustion. It circulates through a baffle to further limit external noise.

The cocoon is made of multi-layer fibreglass reinforced with high-density neoprene foam for maximum acoustic insulation.

## **Light and compact**

Each model in the PAGURO range is designed with made-to-measure components to achieve maximum power in minimum space.

Thanks to the technology developed by VTE, PAGURO generators are ultra-compact, like the PAGURO 4 MY, which produces 3.5 kW continuously, weighs just 65 kg and takes up just 47 x 42 x 52 cm of space.

## **Security**

PAGURO generators are fitted with warning lights and a load indicator with LED bar graph for immediate assessment of the power supplied.

Automatic shutdown in the event of low oil pressure or overheating.

---

## **About Tecmar**

Since 2011, Tecmar has been importing and distributing quality technical equipment exclusively to professionals in the boating, industrial, and camper van life sectors in France.

Specializing in products for all players in the pleasure boating and marine market (construction, repair, refit sites and reseller stores), Tecmar positions itself today as the specialist in its sector.
